The inventor of AutoCAD is Robert M. Searle, who developed this software in 1981 and 1982 while working for Tektronix. The software was introduced to the public in September 1982, as AutoCAD 1, and was initially available for the Tektronix 4D, and the Tektronix 3450 graphical workstation. The first version of AutoCAD was available for the Tektronix 4D and Tektronix 3450 in 1982, and has grown since to include many different features and applications. One of the first new features introduced in AutoCAD 3 was the ability to store separate block definitions for separate files. With the introduction of the external graphics port (EPSON/Tektronix, 1982) to the Tektronix 3450, the Tektronix 4D graphics hardware was discontinued. In the late 1980s and 1990s, AutoCAD could be purchased only on a terminal, and not from a software store. The early version of AutoCAD included more than 1000 glyphs, and also supported EPSON-style character graphics (bordered and non-bordered). In the early years, all glyphs that were drawn were bitmap (one-color) fonts, and there was no native text. In 1989, the "Add" function was introduced in AutoCAD 2, which enabled text to be added directly to the screen. AutoCAD software was created using the graphical programming language "App", which is a Graphical User Interface (GUI) for AutoCAD. The App language resembles BASIC (Beginner's All-purpose Symbolic Instruction Code) with some additions. For example, some data objects such as text and dimensions (length, width, etc) are automatically created and are represented by the App language words "TEXT", "LENGTH", "WIDTH", etc. When an "App" statement is used in AutoCAD, the text is placed on the screen exactly where it should be. The App language was rewritten in 1999 as a Microsoft Windows application. Version History According to Autodesk, as of April 1, 2017, AutoCAD software has been released in the following versions: Version Release Date 1 1981 2 1983 3 1985 4 1990

The list that I want to filter out is found here: {1.247, 5.5, 2.755, 3.915, -2.238, 2.57, 4.7} The problem is that the other list has all the same values except for one. It is: {1.247, 5.5, 2.755, 3.915, -2.238, 2.57, 4.7, -4.285} How do I remove the duplicates from list one to get: {1.247, 5.5, 2.755, 3.915, -2.238, 2.57, 4.7} A: I think what you're looking for is the Union function. For example, if you have a list of lists: l1 = [1.247, 5.5, 2.755, 3.915, -2.238, 2.57, 4.7] l2 = [1. a1d647c40b

The method is a new and improved modification of a commercially available process for the manufacture of three-dimensional polycarbonate articles from two-dimensional master plates. The method permits the production of polycarbonate articles with substantially full depth (thickness) and large size, and which are of high quality and are free from air bubbles
